UNIVINITY

Project 6

By: Sara, Torien, Arissa, Bryce

Your College Journey, Simplified.

An iOS application that helps students discover, evaluate, and track colleges based on their personal preferences.

12 hrs	iOS	Parse
Dev Time	Platform	Backend

PROJECT OVERVIEW

What is Univinity?

- A centralized iOS platform for college exploration
- Swipe-based discovery inspired by modern app UX
- Smart match scoring based on user preferences
- Covers the full journey from discovery to application
- Built with Swift + Parse backend for real-time sync

Target Users

High school students preparing for college applications

Time Invested

12 hours total
Full-stack iOS app
with Parse backend

CORE FEATURES & FUNCTIONALITY

Swipe Discovery

Browse colleges with intuitive swipe gestures. Like or reject with visual feedback & undo.

Search & Filter

Filter by type, size, tuition, location, GPA match and more to find the perfect fit.

Save & Favorites

Save colleges to your list and star favorites for quick access in dedicated tabs.

Application Tracker

Track status per school: Not Started, Started, Applied, Reviewed — all in one place.

Compare Colleges

Side-by-side comparison of up to 3 schools across key metrics and criteria.

Map View

Visualize all saved colleges on an interactive map to see geographic distribution.

OPTIONAL & ADDITIONAL FEATURES

Optional Features

- Favorites system with dedicated tab
- Notes feature for saved colleges
- Compare up to 3 colleges side-by-side
- Map view for location visualization
- Application tracking with status dropdown
- Profile preferences (GPA, budget, state, major)
- Onboarding with walkthrough & survey
- Enhanced UI styling and animations

Additional Features

- Swipe actions with undo, like & reject
- Toggleable action buttons via filters
- Real-time sync across Saved, Favorites & Apps
- Match score system based on preferences
- Responsive layout for all mobile devices
- Per-user onboarding (account-based, not device)

TECHNICAL CHALLENGES & SOLUTIONS

Async Parse Fetching

Solution: Implemented completion handlers and DispatchQueue.main to ensure UI updates on the main thread after async Parse calls complete.

Preventing List Reordering

Solution: Used stable unique identifiers and ordered arrays to maintain consistent list state when switching between tabs.

Shared State Management

Solution: Created a centralized data model with notification-based updates to sync Saved, Favorites, and Applications tabs in real time.

Account-Tied Onboarding

Solution: Stored onboarding completion status in Parse user objects instead of device storage, so new signups always see the walkthrough.

VIDEO WALKTHROUGH

Click anywhere on the player to open the video in your browser

NEXT STEPS

01

Push Notifications

Alert students of upcoming application deadlines and important college dates automatically.

02

Advanced Recommendation Engine

Use ML-based filtering to surface colleges with the highest match scores first, improving personalization.

03

Expanded College Data

Integrate a live college database API for real-time tuition, acceptance rates, and program details.

04

Counselor / Parent Sharing

Allow students to share their college list and application progress with advisors or parents.

Thank You!

UNIVINITY

Empowering students to find their perfect college match.
